

"Failed_-_Device_is_using_an_old_Unified_CVP_version_that_does_not_support_this_operation"

This is observed on ISO build 601,when you add hosts to Web services.

When you click on "Deployment Status" button, the status column reads "Failed - Device is using an old Unified CVP version that does not support this operation",even though you are not using an older version of Unified CVP
