

## Access\_read\_and\_clear\_VXML\_server\_log\_files

You can access, read, and clear the VXML Server log files. Procedure:

1. Open a file browser within the CVP all-in-one-box server.
2. Browse to the location of the application you wish to examine, as follows:

C:\Cisco\CVP\VXMLServer\applications\HelloWorld\logs

C:\Cisco\CVP\VXMLServer\applications\customhelloworld\logs

The following table describes the log files in each log folder.

Log Folder Name	Log File Use
ActivityLog	Provides start and exit information for each element in the voice application in each phone call's call flow.
AdminLog	Provides a log of administrative operations such as start server, deploy and application, update and application, etc.
CVPPDatafeedLog	Indicates that data has been sent to the reporting server.
CVPSNMPLLog	SNMP events for levels 1 through 5 for this application.
ErrorLog	Provides error information for each call.
