

**JAWS Screenreader and Category "trees"**

<b>Problem Summary</b>	The Unified IC reporting interface organizes some objects into categories. Examples are dashboards, reports, and report definitions. A category (represented as a folder icon) can have multiple, nested sub-categories and can contain objects (represented as page icons). Screenreader software does not accurately report (speak the names of) these categories.
<b>Error Message</b>	None
<b>Possible Cause</b>	This is a technical limitation of the interface and the accessibility software.
<b>Recommended Action</b>	None
<b>Release</b>	Release 8.0(1)
<b>Associated CDETS #</b>	None
