

## Application subsystem in partial service and application running for an unexpectedly long time

<b>Problem Summary</b>	The Application subsystem is in partial service and the Application Tasks real-time report shows an application running for an unexpectedly long time.
<b>Error Message</b>	None.
<b>Possible Cause</b>	If an application does not receive a disconnect signal after a call, and the application does not have an error handling mechanism to detect that the call has ended, the Application subsystem might go into partial service. In addition, Application Tasks real-time report might show an application running for an unexpectedly long time.
<b>Recommended Action</b>	Make sure that the application script includes error handling that prevents infinite retries if a call is no longer present.
<b>Release</b>	Release 7.0(1)
<b>Associated CDETS #</b>	None.
