

## Call redirected from one RP to the other causes agent to get stuck in RESERVED

<b>Problem Summary</b>	A call is redirected from one script to the other script where it is queued. When an agent is allocated to this call and the agent goes reserved, the consult call is offered to the agent. At about this time, the SessionRedirectedMsg for the redirect comes in and due to this ICD thinks that the call to the agent was redirected and the agent is moved from reserved to available.

<b>Possible Cause</b>	The SessionRedirectedMsg for the redirect comes in 5 seconds after the redirect request from Redirect Step. If the agent is in RESERVED state at that point in time, such issues can happen.
<b>Recommended Action</b>	Use SetContactInfo step to mark the call as handled in the successful branch of the Redirect step whenever the call is getting redirected from one script to another. This will eliminate the delay in posting the SessionRedirectedMsg
<b>Release</b>	7.0(1), 8.0(1)
<b>Associated CDETS #</b>	None.
