Scenario Setup

MR PG

1. Modify C:\CiscoMB\servlet\Properties\Blender\ACD.ciscocti.properties to have "ctistrategy=Predictive" instead of "ctistrategy=AgentReserved"
2. Stop/Start "Apache Tomcat" service to restart Cisco Media Blender

• Student 1 - Customer on ext 4000

- ◆ Launch IP Communicator with extension 2000
- ◆ Log-in daisy into CTI/OS agent desktop
- ◆ Make agent daisy Not Ready

• Student 2 - Agent on ext 2001

- ◆ Launch IP Communicator with extension 2001

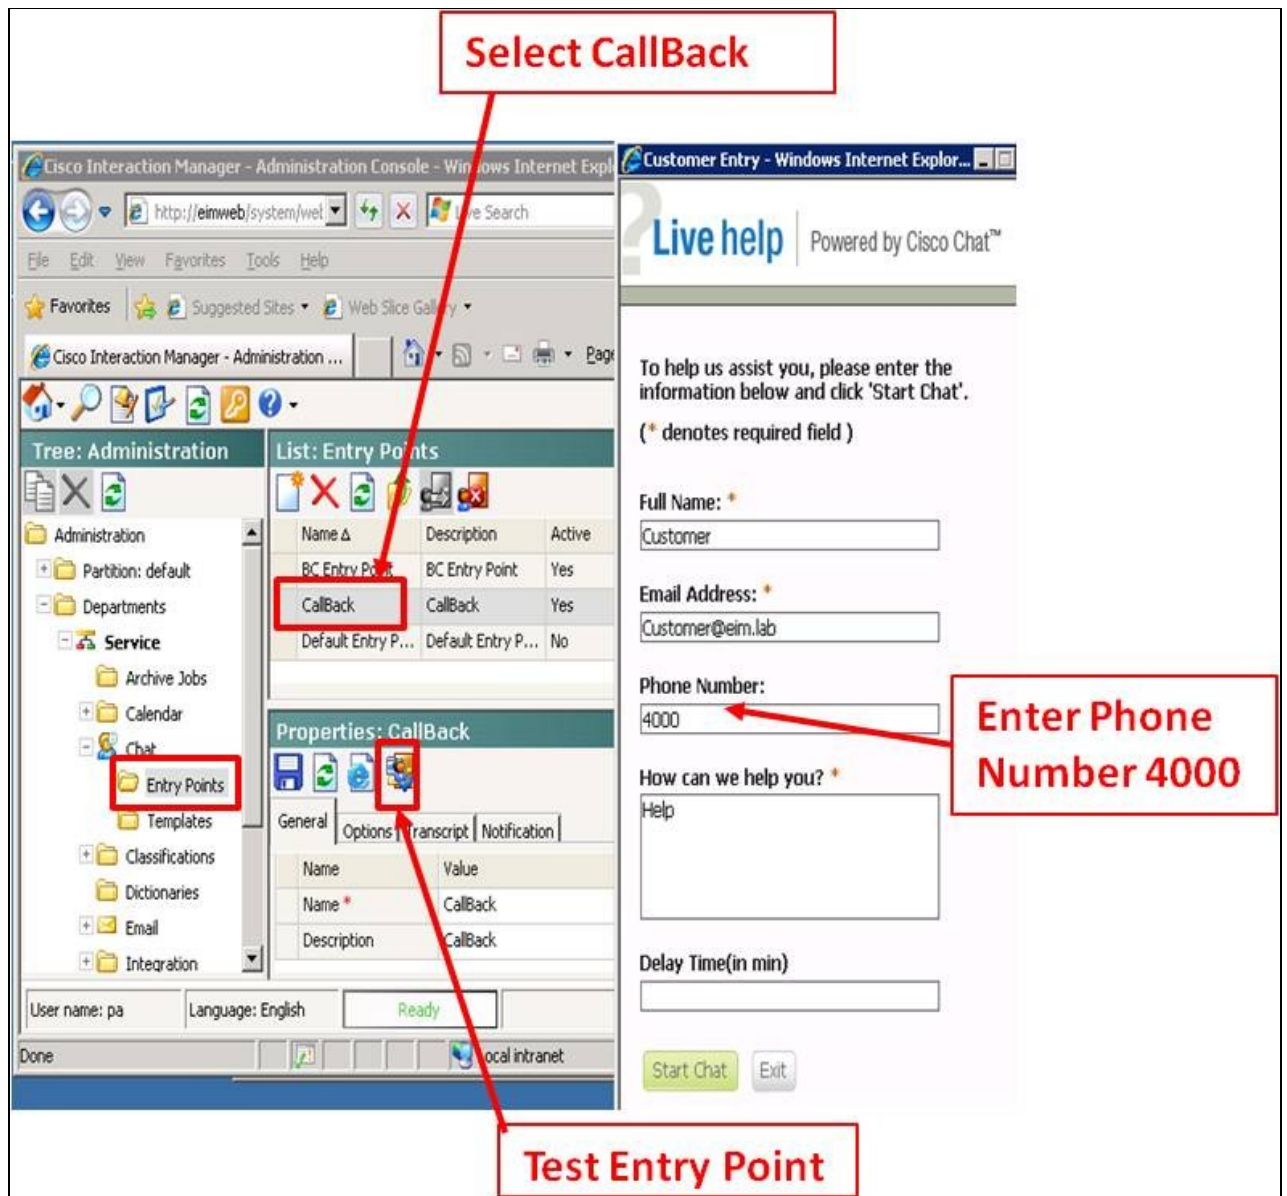

Callback_to_Customer_Fails

- ◆ Log-in dduck into CTI/OS agent desktop
- ◆ Make agent dduck Ready

Initiate a callback through the Callback entry point.

- Launch from the Default partition console by navigating to Administration > Departments > Service > Chat > Entry Points
- From the top right pane select Callback
- From Call Back?s Properties menu Select Test Entry Point
- Fill in the Live Help with Name; Email Address; Phone Number (Enter 4000)

Problem Statement

Callback is not working. Agents are being placed into Not Ready by the system

CMB Validation

- Validate the Media Blender properties. From the Media Blender administration page Navigate to Media Blender > Server > Properties. Verify that medium1 and medium2 files are correctly identified.

<p>Eimpg1a Administration ▼ MEDIA BLENDER ▼ SERVER Start/Shutdown Alerts Latest log Properties ▼ MEDIA Events Statistics</p>	<p>Properties of Blender</p> <ul style="list-style-type: none"> • emailnotify = false • name = Blender • commandhandlers = 200 • verbose = 10 • medium2 = Collaboration.properties ← • medium1 = ACD.ciscocti.properties ← • commandhandlerceiling = 750 • phonehomenotify = false • autostart = true
---	---

- Verify the CiscoCTI properties. Most importantly verify the correct CTI strategy is defined. **UCCE ONLY supports AgentReserved.** Note the Cisco Media Blender will go active even if some of the properties are not correctly defined.

Properties of CiscoCti

- peripheral.username = cmb-eimRGRA

- Call Tracer shows call should route to agent 2001

Callback_to_Customer_Fails

Logging

Set CMB trace level to 10 and restart CMB. Logs will show event synchronization failed. Search further down in the log for Vector and the log will indicate Media Blender is trying to get the first agent from a vector
