## Scenario Setup

### MR PG

1. Enable the following fields in C:\CiscoMB\servlet\Properties\Blender\ACD.ciscocti.properties:

```
# Prefix to dial a long-distance call  
diallongdistanceprefix=91
```

```
# Prefix to dial a local outbound call  
diallocalprefix=9
```

```
# Set this to the local area code, if necessary. If this value is  
# removed from the phone number, diallocalprefix will be prefixed  
# instead of diallongdistanceprefix.  
ignoreareacode=978
```

We will be using the same IPC and agent desktop as in the previous scenario

- Student 1 will be the agent using extension 2000. Make agent "daisy" Ready.
- Student 2 will be the customer using extension 4001. Make agent "dduck" Not Ready.

Initiate a callback through the Callback entry point.

- Launch from the Default partition console by navigating to Administration > Departments > Service > Chat > Entry Points
- From the top right pane select Callback
- From Call Back?s Properties menu Select Test Entry Point
- Fill in the Live Help with Name; Email Address; Phone Number (Enter 978XXX4001, where XXX can be any digits from 1-9)

The screenshot displays the Cisco Interaction Manager Administration Console interface. On the left, a navigation tree shows 'Administration' > 'Service' > 'Chat' > 'Entry Points' selected. The main area is divided into two panes: 'List: Entry Points' and 'Properties: Callback'. The 'List: Entry Points' pane contains a table with the following data:

| Name                | Description         |
|---------------------|---------------------|
| BC Entry Point      | BC Entry Point      |
| Callback            | Callback            |
| Default Entry Point | Default Entry Point |
| Delayed Callback    | Delayed Callback    |
| Integrated Chat     | Integrated Chat     |
| Standalone Chat     | Standalone Chat     |

The 'Properties: Callback' pane shows the 'General' tab with the following details:

| Name        | Value    |
|-------------|----------|
| Name *      | CallBack |
| Description | CallBack |

On the right side of the interface, there is a 'Live help' chat form titled 'Powered by Cisco Chat™'. It contains the following fields and text:

To help us assist you, please enter the information below and click 'Start Chat'.  
(\* denotes required field)

Full Name: \*  
customer

Email Address: \*  
customer@em.lbb

Phone Number: \*  
9784514001

How can we help you? \*  
Help

Delay Time(in min)

Start Chat Exit

Red annotations are present: 'Select Callback' with an arrow pointing to the 'Callback' entry in the list; 'Test Entry Point' with an arrow pointing to the 'Callback' entry in the properties pane; and 'Enter 978XXX4001 for Phone Number' with an arrow pointing to the 'Phone Number' field.

## Problem Statement

Callback is not working; Agent receives a CTI Warning: *You have dialed an invalid number. Please check the number and try again.*

## Isolation

The CTI Warning indicates the error occurred when ext 2000 tried to call 978-451-4001.

- Looking at the JGW1 trace the CiscoCause is UNALLOCATEDNUMBER.

## Validate Call Manager Configuration

Verify Call Routing Configuration in Call Manager for extension 2000.

Verify the Partition and Calling Search Space (CSS) at the device level for 2000

Verify the line CSS for the agent line 2000

Use the Dialed Number Analyzer to validate CSS

- Navigate to Call Manager Serviceability > Tools > Dialed Number Analyzer > Analyzer

## Callback\_to\_Customer\_Fails\_2
