

**AAS - Both AAS servers become master**

<b>Problem Summary</b>	Both AAS servers become master.
<b>Error Message</b>	None
<b>Possible Cause</b>	One of the AAS IP addresses specified during the installation of AAS is 127.0.0.1 (loopback).
<b>Recommended Action</b>	Do not use the loopback IP address. It confuses the Master Selection algorithm causing both AAS servers in a duplexed environment to become master. Use the actual IP address of the computer. <b>Note:</b> Do not use the local IP address (127.0.0.1) as an AAS IP address.
<b>Release</b>	Release 7.5(1) and 8.0
<b>Associated CDETS #</b>	None.
