

AAS - Both AAS servers become master

Problem Summary	Both AAS servers become master.
Error Message	None
Possible Cause	One of the AAS IP addresses specified during the installation of AAS is 127.0.0.1 (loopback).
Recommended Action	Do not use the loopback IP address. It confuses the Master Selection algorithm causing both AAS servers in a duplexed environment to become master. Use the actual IP address of the computer. Note: Do not use the local IP address (127.0.0.1) as an AAS IP address.
Release	Release 7.5(1) and 8.0
Associated CDETS #	None.
