

Cisco Unified CM users display in random order

Problem Summary	On the Cisco Unified CCX User Maintenance window, Cisco Unified CM users display in random order when the number of users returned during the search is greater than 75.
Error Message	None.
Possible Cause	The User Maintenance window on Cisco Unified CCX limits the display to 75 Cisco Unified CM users. If that number is exceeded, the Cisco Unified CM users display in a random order. Instead of the usual logical order of 39001, 39002, 39003, 39004, the list contains 39001, 39003, with 39002 and 39004 not shown.
Recommended Action	Narrow the search by adding additional characters to be matched.
Release	Release 7.0(1)
Associated CDETS #	None.
