

You may need to configure Network Specific Facility (NSF) codes for your Cisco Unified MeetingPlace system when making outdials directly to the PSTN (without an intervening PBX) on trunks using the ISDN protocol. This chapter explains how to configure your Cisco Unified MeetingPlace system with the correct NSF codes when necessary and includes the following sections:

- About NSF Codes
- About the NSF Code Type
- About the NSF Code Value
- About the Optional Carrier Identification Code
- About the Optional Modifying Parameter
- About Configuring NSF Codes

Note: Usually NSF codes are used only in the U.S. and Canada.
