**Custom Search:**

## Notes about Printing as PDF

You can easily make a PDF of any sets of DocWiki pages. Because you enter DocWiki page names, **the PDF always contains the latest versions of the pages on the DocWiki.**

To make it easier for you, we have created several groupings of related pages that you might want to print.

- See [Common Search Groups By Component](#) to see page groupings for Cisco Unified MeetingPlace components (such as Audio Server, Web Conferencing, each integration, etc).
- See [Common Search Groups By Function](#) to see page groupings by function (such as installation, configuration, or troubleshooting).

## Directions for Generating a PDF of Multiple DocWiki Pages at One Time

Read through all these instructions before you do them.

**Note:** Keep this page open so that you can see these instructions.

1. **RIGHT-CLICK and select Open in New Window** either [Common Search Groups By Component](#) or [Common Search Groups By Function](#).
2. Highlight and copy the list of page names that you want to print.
  - ◆ **Tip:** On the new page, click the link in the Table of Contents to go the section you want.
  - ◆ Once you find the grouping of pages that you want to print, do not click the page names, just highlight them.
  - ◆ Do not include the group header name.
  - ◆ Do Control-C to copy the list of page names.
3. Return to this page.
4. On the left, in the toolbox, right-click **Special pages**.
5. Click **Open in New Window**.
6. Scroll down and click **Pdf Export**.
7. In the form, paste the list of DocWiki page names that you copied in step 2.
8. Click **Make PDF**.
9. Select either **Open** or **Save**.

The system generates a PDF of the pages you selected.
