Cisco Unified MeetingPlace, Release 6.x > Cisco Unified MeetingPlace Audio Server > Configuring > Command-Line Interface Reference

When you are logged in to Cisco Unified MeetingPlace via a Telnet session, enter **help** to see a list of most technician commands.

To look up information about a specific command, do the following:

1. Enter **help** followed by the command name. Cisco Unified MeetingPlace displays the command description one screen at a time.
   **Note:** Some commands do not have any Help information. In that case, the Cisco Unified MeetingPlace system displays a message stating that no Help is available for this command.
2. Enter **1** to see the next line. To see more lines, enter a larger number. Larger numbers cause more lines to appear.
   Press the space bar to see the next screen. Use the **resize** command if the amount of text displayed does not fit on your screen. At the end of the file, (END) appears.
3. Return to the tech$ prompt by entering **q** . (You do not need to press **Enter** .)
