

Main page: [Cisco Unified MeetingPlace, Release 7.0](#)

Up one level: [Configuration](#)

About Synchronization

Synchronizing is time consuming and may take one to two days, depending on the amount of data and the bandwidth between the two servers.

We highly recommend a bandwidth of 100 Mbps.

Synchronized Tables

The following tables are synchronized:

- cscres
- cscresfstaccess
- csconf
- csconfatt
- csconfcatrec
- csconfpart
- csconftime
- csdidcnfg
- csdidres
- csflexfield
- csgroup
- csmtgcategory
- csnotification
- csoutdial
- cspomailbox
