Configuration Restrictions

Cisco Unified MeetingPlace Web Conferencing deployments that are customized beyond the built-in configuration capabilities of the product, or beyond the documented configuration settings, procedures, or instructions, are not supported by Cisco Systems.

Examples of such customizations include, but are not limited to, the following: modifying web page templates, changing HTML or Javascript code, changing IIS running parameters or applying custom ASP pages or ISAPI filters, modifying SQL server configuration or authentication method, and modifying Windows OS security through IPsec policies and NTFS ACL.

Cisco Policy for Use of Third-Party Software

The Cisco Unified MeetingPlace Web Conferencing documentation describes the system, end user, and other requirements for the use of the Web Conferencing software. Failure to meet these requirements or the introduction of unsupported third-party products may interfere with the operation of the Web Conferencing software, and may affect Cisco support for the Web Conferencing product.

Proxy Servers

Cisco Unified MeetingPlace Web Conferencing supports most proxy servers on the market. If you are accessing it through a proxy server, set the proxy server as follows:

- Timeout value from 120 seconds to 300 seconds.
- Cache expiration policy set to "Explicit Expiration Information Only."
