

**Main page:** [Cisco Unified MeetingPlace, Release 7.0](#)

**Up one level:** [Reference Information](#)

To find this page, click **Maintenance > SNMP > Community Strings > Add New**.

**Table: Field Reference: Add SNMP Community String Page and Edit SNMP Community String Page**

<b>Field</b>	<b>Description</b>
Community string	Name of the SNMP community string.  Restriction: No spaces allowed.
Accept SNMP packets from any host	Allows the SNMP community string to accept SNMP packets from any host.
Accept SNMP packets only from these hosts	Allows the SNMP community string to accept SNMP packets only from hosts that you specify.
Host IP address	If you choose the <a href="#">Accept SNMP packets only from these hosts</a> radio button, enter an IP address and click <b>Insert</b> to allow the SNMP community string to accept SNMP packets from this host.
Host IP addresses	If you choose the <a href="#">Accept SNMP packets only from these hosts</a> radio button, this field lists all hosts from which this SNMP community string can accept SNMP packets. To remove a host from this list, highlight the IP address and click <b>Remove</b> .
Access privileges	The access privilege given to this SNMP community string. Access privileges provide security by restricting the ability to alter the Cisco Unified MeetingPlace system.
