

Main page: [Cisco Unified MeetingPlace, Release 7.0](#)

Up one level: [Configuration](#)

The Cisco Unified MeetingPlace web-based user interface is composed of a set of template pages that allow users to complete various Cisco Unified MeetingPlace functions. As a system administrator, you can configure which fields are exposed to your users. This information is preserved in the MPWEB database and remains unaffected by Cisco Unified MeetingPlace Web Conferencing software upgrades.

This section describes how to configure the web pages and features that your users see.
