

**Main page:** [Cisco Unified MeetingPlace, Release 7.0](#)

**Up one level:** [Configuration](#)

Dial-out features allow users to quickly and easily join meetings and add other users to meetings in session. [Table: Dial-Out Features and Languages Used in Voice Prompts](#) describes the Cisco Unified MeetingPlace dial-out features, which can be initiated only by users with the "Can call out of meetings" field set to **Yes** in their user profiles.

[Table: Dial-Out Features and Languages Used in Voice Prompts](#) also specifies which voice prompt language each dial-out feature uses. During active meetings, however, voice prompts heard by all meeting participants use the meeting language. If the meeting language is not specified while scheduling the meeting, then the [Language](#) configured in the user profile of the meeting owner becomes the meeting language.

**Table: Dial-Out Features and Languages Used in Voice Prompts**

<b>Dial-Out Feature</b>	<b>Description</b>	<b>Language Used in Each Dialed-Out Call</b>
Find Me	At the scheduled start time of a meeting, Cisco Unified MeetingPlace initiates calls to meeting invitees at the phone numbers specified in their user profiles.  For details and restrictions, see <a href="#">About the Find Me Feature</a> .	The voice prompts use the language specified in the user profile of the invited meeting participant.
Call Me	Meeting participants may join a meeting through the web and use the web interface to have Cisco Unified MeetingPlace call out to their phones.	For authenticated profiled users, the voice prompts use the language specified in the user profile.  For guest users, the voice prompts use the language specified in <a href="#">Guest Profile</a> .
Dial Out From Within a Meeting	During a meeting, a participant may trigger Cisco Unified MeetingPlace to: <ul style="list-style-type: none"> <li>• Call a new participant</li> <li>• Call all missing invitees (not supported in reservationless meetings)</li> </ul>	When the call is triggered by authenticated profiled users, the voice prompts use the language specified in the user profile.  When the call is triggered by guest users, the voice prompts use the language specified in <a href="#">Guest Profile</a> .
