

**Main page:** [Cisco Unified MeetingPlace, Release 7.0](#)

**Up one level:** [Reference Information](#)

Use this page to import user profile information that is specified in a comma-separated values (CSV) file. To find this page, click **Maintenance > Import Data > Import User Profiles**.

**Table: Field Reference: Import User Profiles Page**

Field	Description
Action to perform	Whether to add or delete user profiles from the database.  Default: Add profiles to system
Data file to use	Directory path and filename of the import file.
Overwrite duplicate information	When set to No, existing user profiles in the database are <i>not</i> modified by the import process.  When set to Yes, the system overwrites each existing user profile in the database that matches <i>both</i> the <u>Profile number</u> and <u>User ID</u> of an imported user profile. Exceptions: <ul style="list-style-type: none"> <li>• In the preconfigured Admin profile, the <u>User status</u> and <u>Type of user</u> fields are not updated with imported values.</li> <li>• In the preconfigured Guest profile, the <u>Profile password</u> and <u>Type of user</u> fields are not updated with imported values.</li> </ul> Restriction: The system does <i>not</i> import any user profile that matches only one (not both) of the <u>Profile number</u> and <u>User ID</u> fields of an existing user profile in the database. Instead, the system reports an error and treats this as an attempt to add a new user profile whose <u>Profile number</u> or <u>User ID</u> (both of which must be unique) conflicts with an existing user profile in the database.  Default: No
Send log information to	Choose screen or file.  Default: Screen
Error threshold	If the number of errors that occur while importing user profiles is greater than this error threshold, the system aborts the import.  To estimate the error threshold, determine the number of users in the import file and add

10.

Default: 5000
