

**Main page:** [Cisco Unified MeetingPlace, Release 7.0](#)

**Up one level:** [Integration](#)

With Jabber for Cisco Unified MeetingPlace, users can initiate Cisco Unified MeetingPlace meetings from a Jabber Messenger client. The user who initiates the meeting selects meeting invitees from a list of contacts and invites them to the meeting. Each invitee receives a message (and a pop-up window) inviting them to join the meeting. By clicking on a hyperlink in the invitation message, the invitees can enter the Cisco Unified MeetingPlace Web Conferencing console and have Cisco Unified MeetingPlace dial out to their phones.
