

Main page: [Cisco Unified MeetingPlace, Release 7.0](#)

Up one level: [Reference Information](#)

To find this page, click **System Configuration > Outlook Authentication Configuration**.

Note: This page appears only when the msft_int license is installed.

Use this page to configure the default authentication method for users who schedule Cisco Unified MeetingPlace meetings from Microsoft Outlook.

If you select the Single sign-on authentication method, the following options become available:

- To add a domain, click **Add New**.
- To edit an existing entry, click the name of that entry.
- To delete an entry, check the item and click **Delete Selected**.

Note: This page was introduced in Cisco Unified MeetingPlace Release 7.0.2.

Table: Field Reference: Outlook Authentication Configuration Page, Add Outlook Single Sign-On Domain Page, and Edit Outlook Single Sign-On Domain Page

Field	Description
Outlook Default Authentication method	<p>Choose between the Remember me and Single sign-on user authentication options.</p> <p>Restriction: The Single sign-on option is available only when SSL is enabled on the Application Server.</p> <p>Default: Remember me</p>
Outlook Single Sign-On Domain	<p>Specify all domains that are used by your Cisco Unified MeetingPlace for Microsoft Outlook users.</p> <p>The domain that is listed in the Application Server is the workgroup domain that the client PC is in, not the user domain that the user is logged into. So if your PC is in domainA.company.com and your user account is domainB\<i>user name</i>>, then this value should be domainA.</p>

Table: Field Reference: Outlook Authentication Configuration Page, Add Outlook Single Sign-On Domain Page

NOTE: If you enter any uppercase letters, the system automatically converts them to lowercase letters.

Default: Application Server domain, which was set during installation.
