

**Main page:** [Cisco Unified MeetingPlace, Release 7.0](#)

**Up one level:** [Maintenance Page](#)

The system log captures and buffers high-level details about system software activities. You can choose the severity level that you want to see. The output lists the date and time of the exception, the exception code, the file in which the exception occurs, and a text description of the exception.

**Note:** The system sorts messages by using the date and time that each message was added to the log file. If time is not synchronized across all Cisco Unified MeetingPlace servers, then the time used for sorting may differ from the displayed time stamps, and the log messages may seem to appear out of order. The system uses the time stamp for each message to filter out messages that are outside the specified start and end dates.

#### Procedure

1. Log in to the Administration Center.
2. Click **Services > Logs > View System Logs**.
3. Configure the fields.
4. Click **View Logs**.
