

Main page: [Cisco Unified MeetingPlace, Release 7.1](#)

Navigation: [Integration](#) > [Integrating with IBM Lotus Notes](#)

You can upgrade from Cisco Unified MeetingPlace Release 7.0.2 (MR1) or 7.0.3 (MR2) to 7.1. If you are at Release 7.0.1, then you must first upgrade to Release 7.0.2, before you can upgrade to Release 7.1.

- Cisco Unified MeetingPlace does not support mixed template environments. If you are upgrading from one release of Lotus Domino to another, you must upgrade all users to the same server and template environment.
- Verify that you are currently using supported releases of the Lotus Domino server and IBM Lotus Notes clients. For system requirements, see [System Requirements](#).
- Install Cisco Unified MeetingPlace Web Server Release 7.1. See [Installing the Cisco Unified MeetingPlace Web Conferencing Server](#).
