### Restrictions

- You must install IBM Lotus Notes with Cisco Unified MeetingPlace Release 7.1 in the same directory as Cisco Unified MeetingPlace web conferencing. For example, if you install web conferencing in C:\Program Files\Cisco Systems, also install IBM Lotus Notes with Cisco Unified MeetingPlace Release 7.1 in the Cisco Systems directory.
- Passwords in the IBM Lotus Notes with Cisco Unified MeetingPlace Release 7.1 installer are case-sensitive.

### Prerequisites

- Complete all the tasks in [Prerequisites for Installing IBM Lotus Notes with Cisco Unified MeetingPlace Release 7.1](#).
- Install Cisco Unified MeetingPlace web conferencing Release 7.1 on the server on which you are going to install IBM Lotus Notes with Cisco Unified MeetingPlace Release 7.1.
- You must have Administrator permissions.
- Install the applicable release of the IBM Lotus Notes client, depending on your Lotus Domino Server.
- You must already have run the IBM Lotus Notes client (that is, opened the client, connected to the Lotus Domino Server, and closed the client) so that the notes.ini file was created.

### Procedure

1. Insert the IBM Lotus Notes with Cisco Unified MeetingPlace Release 7.1 CD in to your CD or DVD-ROM drive.

2. Double-click the setup.exe file and follow the instructions in the InstallShield wizard.
3. Click **Finish** when you reach the last screen.  
The system restarts the server.

### **What to Do Next**

If your Cisco Unified MeetingPlace deployment includes two web servers or allows users to access external Cisco Unified MeetingPlace web meetings from their Lotus Notes client, install the Notes Gateway on the external server or manually copy all 33 Notes-related template files from the internal server located at C:\Program Files\Cisco Systems\MPWeb\Template to the same location on the external server.
