Previous page: [Page References](#)

This page is used to import video types into your system and allows you to manually back up your video type configuration.

Table: Fields on the Import Video Types Page

Field	Description	Value
Action to perform	Whether to add or delete video types from the system.	Add video types to system/ Delete video types from system Default: Add video types to system
Data file to use	Directory path and filename of the import file that contains the video type information.	To locate the file, click Browse .
Overwrite duplicate information	Whether to overwrite data that is duplicated in the target file as a result of importing. If you select No , all existing video types in the system are skipped and remain as is. If you select Yes , existing video types in the system are overwritten by any duplicate imported video types. Exceptions: <ul style="list-style-type: none"> • Video types with the same name but a different ID are imported with a different name. If this happens, the system displays a message. • The default video type cannot be deleted but can be modified. 	No/Yes Default: No
