

Cisco Unified MeetingPlace Release 6.1 > Web Conferencing > Configuring

Cisco Unified MeetingPlace Web Conferencing is designed to manage itself automatically with minimal administrative activities, such as modifying the polling schedules and purging. However, it is important to consider the potential impact that Web Conferencing can have on network and hardware resources.

See the following sections:

- About Web Conferencing Data Storage
- About the Replication Service
- About Purging Attachments and Recordings
- About Audio File Conversion
