

[Cisco Unified MeetingPlace Release 6.1 > Cisco Unified MeetingPlace for Microsoft Outlook](#)

Note: Cisco Systems cannot support issues caused by customizations that you make by using procedures described in this page.

This page discusses advanced methods you can use to customize the scheduling forms in Cisco Unified MeetingPlace for Outlook.

See the following sections:

- [Customizing the Scheduling Forms](#)
- [Available Tags](#)

Contents

- [1 Customizing the Scheduling Forms](#)
 - ◆ [1.1 To Customize the MPOLSchedule.htm Form](#)
- [2 Available Tags](#)
 - ◆ [2.1 Table: Available Tags](#)

Customizing the Scheduling Forms

You can easily make changes to the scheduling forms by using the methods in described in [Customizing the Scheduling and Notification Forms for Cisco Unified MeetingPlace for Outlook](#). Changes you make by using the procedures on that page are preserved if you upgrade in the future.

Note, however, that the changes you make by using the procedures on this page will be overwritten if you upgrade to a new version of Cisco Unified MeetingPlace for Outlook.

The Cisco Unified MeetingPlace for Outlook scheduling form (MPOLSchedule.htm) allows you to customize the information that is displayed in the Meeting Settings and Advanced Settings pages of the scheduling form in the MeetingPlace tab. The Advanced Settings page appears as a table in the MPOLSchedule.htm form.

The MPOLSchedule.htm template form contains scheduling fields in the form of HTML tags, with all but the most popular commented out. It does not contain all scheduling fields available to Cisco Unified MeetingPlace for Outlook because even commented fields must be downloaded to the MeetingPlace tab each time users click this tab. The MPOLSchedule.htm form therefore strikes a balance between extensive customizability and usability.

Note: Customizing the MPOLSchedule.htm form by using methods described on this page require proficiency with HTML and Java Script. You must be familiar with these before you attempt to customize the MPOLSchedule.htm form.

To Customize the MPOLSchedule.htm Form

1. Go to <drive>:\Program Files\Cisco Systems\mpweb\template and make a backup copy of MPOLSchedule.htm.
2. Open **MPOLSchedule.htm** in a text editor.
3. Comment out or uncomment information, or add tags. See [Table: Available Tags](#) for a list of tags. Note the following:
 - ◆ Make sure that you set the onChange event for each field and tie it to the onMtgChanged JavaScript function.
 - ◆ Note that the fields are in table rows. Comment out the entire table row <tr>.
 - ◆ We recommend that you add most of your fields in the Advanced Settings tab. This is another table on the same HTML page.
4. Save the file.
5. If changes do not appear after you modify this file, try restarting the Cisco Unified MeetingPlace Web Conferencing service. In Windows, choose **Start > Settings > Control Panel > Services**. Right-click the **Cisco Unified MeetingPlace Web Conferencing** service and choose **Restart**.

Available Tags

The Cisco Unified MeetingPlace for Outlook scheduling form (MPOLSchedule.htm) can be customized to include any number of the following tags. Tags are both input and output unless otherwise specified. Output tags can be followed by the display methods of TEXT, FORM, or LIST as follows:

- TEXT returns the value of the data.
- FORM returns the data in a form or table element. If the field is not modifiable, it is returned in read-only format.
- LIST returns an unnumbered list.

Not all display methods can be used by all tags.

Table: Available Tags

Tag	Description	Values	Description
Year	Year for which the meeting is scheduled	4 digit year	FORM
Month	Month for which the meeting is scheduled	1-12	FORM
Day	Day for which the meeting is scheduled	1-31	FORM
Hour		1-12	FORM

	Hour for which the meeting is scheduled
