Up one level: [Planning Your Deployment](#)

The Cisco Unified MeetingPlace system supports a number of integrations. Use the information in this chapter to help you decide which integrations to install on your system and which hardware to use for each. The Cisco Unified MeetingPlace Release 8.5 system can have a maximum of 16 integration servers

Microsoft Outlook for Cisco Unified MeetingPlace Integration

There are two types of Microsoft Outlook for Cisco Unified MeetingPlace integration:

- Front-end integration is done through the Microsoft Outlook plug-in. It enables end users to schedule and attend Cisco Unified MeetingPlace meetings by using their Microsoft Outlook clients, as well as to receive e-mail notifications for meetings to which they have been invited. The plug-in doesn't interact with Microsoft Exchange server directly.
- Back-end integration is done through the Notification module as part of the Application Server, which interacts with the Microsoft Exchange server directly. Users can schedule Cisco Unified

MeetingPlace meetings from the Cisco Unified MeetingPlace Web Server. The user profiles for invitees specify Microsoft Exchange as the email type.

The Microsoft Outlook for Cisco Unified MeetingPlace back-end integration is automatically installed as part of the Application Server installation. Front-end integration requires the Cisco Unified MeetingPlace Outlook plug-in to be installed on Microsoft Outlook clients.

IBM Lotus Notes for Cisco Unified MeetingPlace Integration

IBM Lotus Notes for Cisco Unified MeetingPlace integrates the Cisco Unified MeetingPlace system with your IBM Lotus Domino Server. This integration allows end users to schedule and attend Cisco Unified MeetingPlace meetings by using their IBM Lotus Notes for Cisco Unified MeetingPlace clients as well as to receive e-mail notifications for meetings to which they have been invited. End users can choose to accept meeting invitations and have meetings automatically display in their IBM Lotus Notes for Cisco Unified MeetingPlace calendars, or decline the invitations if they cannot attend the meetings.

The IBM Lotus Notes for Cisco Unified MeetingPlace integration enables end users to perform the following tasks:

- Schedule Cisco Unified MeetingPlace meetings from their IBM Lotus Notes for Cisco Unified MeetingPlace calendars.
- Reschedule and delete Cisco Unified MeetingPlace meetings.
- Receive e-mail notifications for Cisco Unified MeetingPlace meetings, including update notifications for rescheduled meetings, which they can accept or decline.
- Attend Cisco Unified MeetingPlace meetings using click-to-attend web links in their meeting notifications or by clicking a Connect button in their IBM Lotus Notes for Cisco Unified MeetingPlace calendar entries.
- Change their Cisco Unified MeetingPlace user passwords (by using the Tools > Preferences menu option).

Related Topics

For information on installing and configuring the IBM Lotus Notes for Cisco Unified MeetingPlace gateway, see the *Integration Note for Installing and Configuring IBM Lotus Notes for Cisco Unified MeetingPlace with Cisco Unified MeetingPlace Release 8.5* at

Integrating with Cisco Unity Connection

If you configure Cisco Unity Connection for calendar integration with Cisco Unified MeetingPlace, Cisco Unity Connection users can do these activities by phone:

- Join a meeting that is in progress.
- Hear a list of the participants for a meeting.
- Send a message to the meeting organizer.
- Send a message to the meeting participants.
- Set up reservationless meetings.

Integrating with Cisco Unified Personal Communicator

When Cisco Unified MeetingPlace is integrated with both Cisco Unified Personal Communicator and Cisco WebEx, users who are in a Cisco Unified Personal Communicator conversation can quickly share data through a Cisco WebEx web meeting. The audio portion of the meeting is provided by Cisco Unified Personal Communicator.

For information on configuring Cisco Unified Personal Communicator to work with Cisco Unified MeetingPlace, see the online help in the administrator interface or the *Configuration Guide for Cisco Unified MeetingPlace Release 8.5* at http://www.cisco.com/en/US/products/sw/ps5664/ps5669/products_installation_and_configuration_guides_list.html.

Integrating with Cisco Unified IP Phones

You can integrate Cisco Unified MeetingPlace with Cisco Unified IP Phones so that users can see and manage their meetings on their phones through an application called Cisco Unified MeetingPlace PhoneView.

Cisco Unified MeetingPlace PhoneView offers users a convenient way to join meetings, start reservationless meetings, view a list of upcoming meetings, and view meeting details. After joining a meeting, a user can perform in-meeting operations such as locking the meeting, recording the meeting, viewing a list of participants, and muting or ejecting participants.
