

**Main page:** [Cisco Unified MeetingPlace Release 8.6](#)

**Print PDF:** [Cisco Unified MeetingPlace Release 8.6 -- Print Compatibility Matrix](#)

**Note: MeetingPlace customers with releases below 8.6MR1 will not be able to schedule meetings. MeetingPlace will need to be upgraded to MeetingPlace 8.6MR1 to be compatible with this change. The latest MeetingPlace software version can be downloaded at [cisco.com](http://cisco.com).**

This document provides information for all releases of Cisco Unified MeetingPlace Release 8.6 including the following:

- Release 8.6.2 (also referred to as 8.6 MR1)
- Release 8.6.1

**Note:** Cisco Unified MeetingPlace Release 8.6 is not backwards compatible. All major components, such as the Application Server/Express Media Server, Hardware Media Server and Web Server must be at Release 8.6.

## Cisco Unified Communications Manager Compatibility for Release 8.6

Cisco Unified Communications Manager Version	Supported with Cisco Unified MeetingPlace Release 8.6	SIP Trunk Calls/Second	Number of Audio/Video Server Nodes Supported	Notes
6.1(5)	Y	<17	1 node deployment only	Not supported in WebEx-scheduling deployments

Cisco\_Unified\_MeetingPlace\_Release\_8.6\_--\_Compatibility\_Matrix

7.0(2)	Y	17.77	4 node deployment (requires WebEx front-end)	Lower scaleability with multinode, max of 8cps + 75% refers with 4 nodes, brings down ports per node to 800
7.1(5)	Y	18.52	4 node deployment (requires WebEx front-end)	Lower scaleability with multinode, max of 8cps + 75% refers with 4 nodes, brings down ports per node to 800
8.0(1)	Y	24.69	1 node deployment only	Not supported in WebEx-scheduling deployments
8.0(2)	Y	24.69	1 node deployment only	Not supported in WebEx-scheduling deployments
8.0(3)	Y	8	4 server deployment (requires WebEx front-end)	Supports 1000 ports per node. Verified 8cps incoming call rate with 75% call refer rate.  CUCM 8.0(3) supports SIP Refers for multinode Cisco Unified MeetingPlace systems. You must open a case with Cisco TAC against Cisco Unified Communications Manager to obtain the latest Engineering Special (ES) or Service Update (SU) version of CUCM 8.0(3).
8.5(1)	Y	36	16 server deployment (requires WebEx front-end)	Supports 1200 ports per node  Total number of nodes includes 12 Conferencing nodes, two additional Conferencing nodes for resiliency, and two Meeting Directors  Not supported for ad-hoc meetings
8.5(2)	Y	36	16 server deployment (requires WebEx front-end)	Supports 1200 ports per node  Total number of nodes includes 12 Conferencing nodes, two additional Conferencing nodes for resiliency, and two Meeting Directors
8.6(1)	Y			Supports 1200 ports per node

Cisco\_Unified\_MeetingPlace\_Release\_8.6\_--\_Compatibility\_Matrix

		36	16 server deployment(requires WebEx front-end)	Total number of nodes includes 12 Conferencing nodes, two additional Conferencing nodes for resiliency, and two Meeting Directors
9.0(1)	Y	36	16 server deployment (requires WebEx front-end)	Supports 1200 ports per node Total number of nodes includes 12 Conferencing nodes, two additional Conferencing nodes for resiliency, and two Meeting Directors
9.1(2)	Y	36	16 server deployment (requires WebEx front-end)	Supports 1200 ports per node Total number of nodes includes 12 Conferencing nodes, two additional Conferencing nodes for resiliency, and two Meeting Directors
10.0(1)	Y	36	16 server deployment (requires WebEx front-end)	Supports 1200 ports per node Total number of nodes includes 12 Conferencing nodes, two additional Conferencing nodes for resiliency, and two Meeting Directors
10.5(1)	Y	36	16 server deployment (requires WebEx front-end)	Supports 1200 ports per node Total number of nodes includes 12 Conferencing nodes, two additional Conferencing nodes for resiliency, and two Meeting Directors
11.0(1)	Y	36	16 server deployment (requires WebEx front-end)	Supports 1200 ports per node Total number of nodes includes 12 Conferencing nodes, two additional Conferencing nodes for resiliency, and two Meeting Directors For 8.6MR1 WebEx-Scheduling Deployments (multinode) open a case with Cisco TAC against the Cisco Unified Communications Manager to

				obtain the latest Engineering Special (ES) or Service Update (SU) version of CUCM 11.0(1).

## Audio Endpoint Compatibility for Release 8.6

The following Cisco Unified IP Phones are supported in Release 8.6:

- 7940 G and G-GE series (SCCP only)
  - ◆ Minimum firmware version 6.0(4.3), also called App Load ID P00306000403
- 7941, 7942, and 7945
- 7960 G and G-GE series (SCCP only)
  - ◆ Minimum firmware version 6.0(4.3), also called App Load ID P00306000403
- 7961, 7962 and 7965
- 7970 G series
- 7971, 7975
- 8961
- 9951 and 9971
- Cisco IP Communicator Release 1.1(5) or later

**Note:** For information about upgrading the firmware, see the Cisco Unified Communications Manager documentation.

## Video Endpoint Compatibility for Release 8.6

This section provides compatibility information between Cisco Unified MeetingPlace Release 8.6 and various video terminals when using Cisco Unified Communications Manager (CUCM).

All testing was performed with Cisco Unified MeetingPlace connected to Cisco Unified Communications Manager via SIP trunk.

- Cisco Unified MeetingPlace Release 8.6 was tested with CUCM 10.0 and CUCM 10.5.

For H.323 testing, the terminal was registered to a H.323 Gatekeeper, which was connected to Cisco Unified Communications Manager through an H.323 trunk. For SIP and SCCP, the terminal was registered directly to Cisco Unified Communications Manager.

### Notes:

- WebEx-scheduling deployments do not support Cisco Unified Communications Manager Release 8.0(1) and 8.0(2).
- Endpoints with the following test results are likely to drop calls when transferring to a breakout session, initiating a #31 dial-out call, or exiting the meeting with #9:
  - ◆ Dial in-fail
  - ◆ Dial out-fail

- ◆ Direct to meeting-OK or "-"

These video endpoints typically do not correctly support the required media transfer mechanism.

- Transferring a Cisco Unified MeetingPlace call from a Cisco-brand phone to a third-party SIP video terminal is likely to result in an audio-only connection. This is due to differences in the way Cisco and third-party terminals negotiate transport of telephony events. The differences cause Cisco Unified Communications Manager to insert a media termination point (MTP) in the call. Unless a hardware MTP resource is available, this insertion will block the video stream.

## Release 8.6 Compatibility Test Results with the Hardware Media Server

Following are the test results for video endpoint compatibility when using Cisco Unified MeetingPlace Release 8.6 with a Hardware Media Server (HMS).

For a complete list of supported endpoints, refer to

[http://docwiki.cisco.com/wiki/Cisco\\_Unified\\_MeetingPlace\\_Release\\_8.6\\_--\\_Compatibility\\_Matrix](http://docwiki.cisco.com/wiki/Cisco_Unified_MeetingPlace_Release_8.6_--_Compatibility_Matrix) .

### Notes:

- The Hardware Media Server supplies Standard Definition video. High Definition video is not supported.
- H.323 endpoints must be configured as video terminals in order to have video.

### Terminology Used in Video Endpoint Compatibility Test Results for Release 8.6

The following table describes the terminology used in [Table: Video Endpoints Compatible with Cisco Unified MeetingPlace Release 8.6 and HMS](#) and [Table: Video Endpoints Compatible with Cisco Unified MeetingPlace Release 8.6 and EMS](#).

Terminology	Description
<b>Test</b>	
Dial In	Tested dialing in to Cisco Unified MeetingPlace.
Dial Out	Tested dialing out from Cisco Unified MeetingPlace by using a web browser command or by using the TUI command #31.
Direct to Meeting	Tested dialing out from Cisco Unified MeetingPlace using the scheduled "direct to meeting" mode. The process was to configure a video terminal profile for outdial to terminal, tell the video terminal to skip the meeting entry prompts on outdial, and then invite the terminal to the meeting.

## Cisco\_Unified\_MeetingPlace\_Release\_8.6\_--\_Compatibility\_Matrix

4CIF	Tested whether the terminal worked when tested with 4CIF using H.263.
<b>Result</b>	
OK	The terminal was able to enter a meeting using video.
Audio Only	The terminal was able to enter a meeting, but without video or with one-way video.
Fail	The terminal was not able to enter a meeting. The failure may have been at initial connection or at meeting entry.
"_"	The terminal was not tested in this mode.

### Video Format Support for Release 8.6

Table: Supported Video Formats lists the supported video formats for various combinations of the scheduler user's Video Preferences and the codec used by the video terminal.

**Note:** If Cisco Unified Communications Manager causes the connection rate to be lower than the maximum for your scheduler user's Video Preferences (384 kbps for standard rate, 2 Mbps for high rate), then the resolution or frames per second sent by Cisco Unified MeetingPlace may be reduced.

Video Mode	Codec	Video Format	Frames per Second
High rate (2 Mbps maximum)	H.264	CIF, QCIF	30
	H.263	4CIF	15
	H.263	CIF, QCIF	30
	H.261	CIF, QCIF	30
Standard rate (384 kbps maximum)	H.264	CIF	15
	H.264	QCIF	30
	H.263	CIF, QCIF	30
