- [Configuring a Presence Gateway on the Cisco Unified Presence Server](#)

After the Exchange server is installed and configured, you can add your end users to the Active Directory and associate telephone numbers with users.

In the Microsoft Active Directory Application window, add a user name and the telephone number that are associated with each particular user. The user names configured in Active Directory must be identical to those names defined in Cisco Unified Communications Manager.

Note: For detailed information about how to configure Active Directory, refer to the Active Directory online help. You can also find more information about Microsoft Windows Server Active Directory at the following URL: <http://technet2.microsoft.com/windowsserver/en/technologies/featured/ad/default.aspx>
