About SMTP Proxy Addresses

This page contains information on how to use the API to list SMTP Proxy Addresses for a user.

Listing and Viewing

The following is an example of a GET that lists all SMTP Proxy Addresses for a user:

```
GET http://<connection-server>/vmrest/user/smtpproxyaddresses
```

The following is the response from the above GET request:

```
200
OK
<?xml version="1.0" encoding="UTF-8"?>
<SmtProxyAddresses>
  <SmtProxyAddress>
    <URI>/vmrest/user/smtpproxyaddresses/9fd21b87-1509-42f1-88ce-3f36122c68ee</URI>
    <ObjectId>9fd21b87-1509-42f1-88ce-3f36122c68ee</ObjectId>
    <SmtAddress>somedude@somewhere.com</SmtAddress>
  </SmtProxyAddress>
  <SmtProxyAddress>
    <URI>/vmrest/user/smtpproxyaddresses/fc107ad8-b9e5-409e-b0bc-62e295c7532e</URI>
    <ObjectId>fc107ad8-b9e5-409e-b0bc-62e295c7532e</ObjectId>
    <SmtAddress>someotherdude@somewhereelse.com</SmtAddress>
  </SmtProxyAddress>
</SmtProxyAddresses>
```

To retrieve a specific SMTP Proxy Address for a user by its object ID:

```
GET http://<connection-server>/vmrest/user/smtpproxyaddresses/<objectid>
```
