

Clicking the Emergency or Supervisor Assist buttons results in an error

Problem Summary	Clicking the "Emergency" and/or "Supervisor Assist" buttons on the Agent desktop causes an error message.
Error Message	None.
Possible Cause	<p>There are several reasons for this symptom:</p> <ol style="list-style-type: none"> 1. The agent may be in an inappropriate state. The "Emergency" and "Supervisor Assist" buttons operate similarly to the "Make Call" button in that they make a call to the supervisor. 2. The supervisor may be in an inappropriate state. 3. There may be a problem with the ICM configuration.
Recommended Action	<ol style="list-style-type: none"> 1. In order for these buttons to function correctly the agent must be in a state that allows it to make a call (for example, with IPCC, the agent must be in Not Ready state). 2. The supervisor must be in Available/Ready state. 3. This functionality requires an ICM script (refer to <i>CTI OS System Manager Guide for Cisco ICM/IPCC Enterprise & Hosted Editions</i>) for routing these calls as well as Supervisor and Agent Team configuration. A good test is to try this functionality with CTITest (emergency and assist commands). Also, a supervisor needs to be in the Available/Ready state to accept these types of calls.
Release	Release 7.5(x)
Associated CDETS #	None.
