

Collect\_Traces\_for\_SIP\_(Castellano\_IOS)\_Gateway

<b>Problem Summary</b>	Collect Traces for SIP (Castellano IOS) Gateway
<b>Error Message</b>	NA
<b>Possible Cause</b>	NA.
<b>Recommended Action</b>	<p>To collect logs for SIP Gateway, follow the steps mentioned below :</p> <p>1. set logging to the buffer:</p> <pre>no logging console debug logging buffer debug logg buffer 500000</pre> <p>2. Choose what info you need to log. Probably, most often you need:</p> <pre>debug ccsip error debug ccsip messages</pre> <p>3. When you are ready to collect the trace, do:</p> <pre>clear logging</pre> <p>4. To copy traces as a file,</p> <pre>show logg   redirect tftp://xxx.xxx.xxx.xxx/file.log</pre> <p>Here xxx.xxx.xxx.xxx is the IP address of your tftp server. We can do the #1 only once, and save it into startup.config. We need to do #2 after every reboot of the gateway. We need to do #3 and #4 every time.</p>
<b>Release</b>	Release 8.5(1)
<b>Associated CDETS #</b>	NA
