

Components in deactivated state

Problem Summary	Few components in either node are in de-activated state and we need to activate them
Error Message	The control center shows components are not running and/or functionality of associated components is affected
Possible Cause	Due to some errors the components that were failing were put in de-activated state
Recommended Action	<ol style="list-style-type: none"> 1. Login into uccxservice using uccx admin credentials 2. Once login is successful, while in the main page, type the URL <a href="https://<uccx ip>:8443/uccxservice/componentactivation/getnodelist.htm">https://<uccx ip>:8443/uccxservice/componentactivation/getnodelist.htm 3. In this page select the node for which component state needs to be verified 4. If the components are showing as de-activated, then click the "Activate All" button to initiate the activation for the same
