

Data_Check_Shows_Mismatch_for_Route_Partition_also,_When_CTI_Line(s)_are_Deleted_in_Cisco_Unified_CM

Problem Summary	If any of the CTI Lines is deleted in Cisco Unified CM, mismatch is displayed even for Route Partition after performing Data Check.
Error Message	NA
Possible Cause	If a CTI line associated with a CTI port is deleted in Cisco Unified CM, that device will not have any route partition also. So mismatch will be displayed for route partition as well for the corresponding Call Control Group.
Recommended Action	Performing Data Resync creates the deleted CTI lines in Cisco Unified CM and associates to the corresponding CTI port as well. So route partition mismatch will also be corrected.
Release	Release 8.5(1)
