

## FACT\_import\_scan

To add the scan to the current repository, use the **import scan** command.

**import scan** from *{file}*

### Syntax Description

|             |   |
|-------------|---|
| from        | Identifies the source set.                          |
| <i>file</i> | Indicates the file from which the scan is imported. |

### Command Default

No default behavior or values.

### Examples

The following example shows importing the scan previously exported to the file "myscan," making it the current scan:

```
fact> import scan from myscan  
Overwrite existing scan in repository [Y/n]? yes
```

### Related Commands

**export repository**  
**export scan**  
**import repository**
