

FACT_import_scan

To add the scan to the current repository, use the **import scan** command.

import scan from *{file}*

Syntax Description

| | |
|-------------|---|
| from | Identifies the source set. |
| <i>file</i> | Indicates the file from which the scan is imported. |

Command Default

No default behavior or values.

Examples

The following example shows importing the scan previously exported to the file "myscan," making it the current scan:

```
fact> import scan from myscan  
Overwrite existing scan in repository [Y/n]? yes
```

Related Commands
