

## Performance issues as a result of hardware failure

<b>Problem Summary</b>	You may see performance issues (like recording errors) when a hardware failure has occurred.
<b>Error Message</b>	None. You start seeing recording errors more frequently.
<b>Possible Cause</b>	Hardware failures: For example, the disk drives attached to your host begin failing (most frequently seen).
<b>Recommended Action</b>	<p>Perform the following checks:</p> <ol style="list-style-type: none"> <li>1. Check the vSphere client.</li> <li>2. Look for alarms generated against the VM host where you see the failure.</li> <li>3. Replace the faulty hardware using the instructions applicable to your failure.</li> </ol>
<b>Release</b>	Release 8.5(1), Release 8.5(2), Release 8.5(3), Release 8.5(4), and Release 9.0(1).
<b>Associated CDETS #</b>	None.
