

## "Password Does Not Meet the Operating System Security Requirements" Error

<b>Problem Summary</b>	If an attempt is made to change an existing user password before the domain password policy's minimum password age is reached, the user receives an error.
<b>Error Message</b>	Password does not meet the operating system security requirements.
<b>Possible Cause</b>	This condition is caused by attempting to change an existing user password before the domain password policy minimum password age has been reached.
<b>Recommended Action</b>	The user password should not be changed until the minimum password age specified in the password policy for the domain has been exceeded.
<b>Release</b>	Release 7.0(2)
<b>Associated CDETS #</b>	None.
