

Golden Template: Using 9.0.x Golden Templates in Release 10.0

Problem Summary	Can I use Golden Templates created in Release 9.0 when I upgrade to Release 10.0?
Error Message	N/A
Possible Cause	No. The Golden Template process has changed in version 10.0. The 10.0 process exports a compressed version of the VMs to a local disk or network share. These compressed formatted VMs are used in the import process and are expanded into the full VM format. Given that the 9.x Golden Template worked with the different exported format, the new template process will not work with the previously exported templates.
Recommended Action	Create new Golden Templates after the upgrade to Release 10.0.
Release	Release 10.0
Associated CDETS #	None
