

Autoconfiguration data lost when PG switches to the other side

Problem Summary	Autoconfiguration data is lost (marked as unused) when IPCC Enterprise Gateway PG switches over to the other side.
Error Message	None.
Possible Cause	The registry values might not be accurate. Check the value of the registries ServerPeripheralID1, ServerPeripheralID2 under ICM\<cust inst>\<PGxx>\CurrentVersion\PIMS\pim1\ACMIData\Dynamic. The value of these two registries must be set to the peripheralID of the child.
Recommended Action	Correct the registry values.
Release	Release 7.5(1) and 8.0
Associated CDETS #	None.
