

## Autoconfiguration data lost when PG switches to the other side

<b>Problem Summary</b>	Autoconfiguration data is lost (marked as unused) when IPCC Enterprise Gateway PG switches over to the other side.
<b>Error Message</b>	None.
<b>Possible Cause</b>	The registry values might not be accurate. Check the value of the registries ServerPeripheralID1, ServerPeripheralID2 under ICM\<cust inst>\<PGxx>\CurrentVersion\PIMS\pim1\ACMIData\Dynamic. The value of these two registries must be set to the peripheralID of the child.
<b>Recommended Action</b>	Correct the registry values.
<b>Release</b>	Release 7.5(1) and 8.0
<b>Associated CDETS #</b>	None.
