

Autoconfiguration data lost when PG switches to the other side

| | |
|---------------------------|---|
| Problem Summary | Autoconfiguration data is lost (marked as unused) when IPCC Enterprise Gateway PG switches over to the other side. |
| Error Message | None. |
| Possible Cause | The registry values might not be accurate. Check the value of the registries ServerPeripheralID1, ServerPeripheralID2 under ICM\<cust inst>\<PGxx>\CurrentVersion\PIMS\pim1\ACMIData\Dynamic. The value of these two registries must be set to the peripheralID of the child. |
| Recommended Action | Correct the registry values. |
| Release | Release 7.5(1) and 8.0 |
| Associated CDETS # | None. |
