

Identifying the Cisco Emergency Responder Groups and Servers in a Cisco Emergency Responder Cluster

If you are connected to the administrator's interface on a Cisco ER server, you can view the details of the server and the Cisco ER group's standby server by selecting **System > Cisco ER Group Settings**.

You can also identify the Cisco ER groups and their Cisco ER servers that are in the same Cisco ER cluster. To view the other Cisco ER groups in the cluster, select **System > Cisco ER Groups in Cluster**. From the Cisco ER Groups in Cluster page, select the group you want to view; and Cisco ER displays the Cisco ER servers that are in the group. To view the details for these servers, you must log in to the Cisco ER Administration interface running on one of the servers, select **System > Cisco ER Groups in Cluster**, then select the group you want to view from the list of groups.

If you need to uninstall a Cisco ER group, first delete the group from the Cisco ER cluster using this page. You must log in as a system administrator to delete the group. Deleting the group from the cluster simply removes the entries for the group from the Cisco ER Cluster DB; it does not remove Cisco ER from the group's servers.
