

Installation: SQL Hardening

Problem Summary	During installation SQL hardening fails
Error Message	Not applicable.
Possible Cause	It is possible for the Cisco Unified IC SQL Hardening to fail if it is preempted by your organization's SQL Hardening policy.
Recommended Action	None. During the installation, SQL Hardening is applied to the Archiver and the CUIC databases. SQL Hardening is the process of allowing connection to SQL Server by Windows authentication only. Should SQL Hardening fail for any reason, there is no effect on functionality. In the event of the failure of SQL Hardening, it will be possible to connect to SQL Server using both Windows authentication and SQL authentication.
Releases	Release 7.5(x)
Associated CDETS #	None
