JavaScript <, >, & symbols in vxml var expr declaration

Problem Summary	How to use JavaScript <, >, & symbols in vxml var expr declaration
Error Message	
Possible Cause	wrong use of java script symbols.
Recommended Action	Many JavaScript operators (<, >, &, &&) have special significance in XML, thus their equivalent entities must be used in expressions and conditions. For example operators and their corresponding entities are: < &(ampersand)lt; > &(ampersand)gt; & &(ampersand)amp; " &(ampersand)quot; remove the 'ampersand' while using the same.
