

Macro with delays causes the PC to lock up

Problem Summary	The administrator created a macro and put in some delays. This appears to cause the PC to lock up while the macro runs.
Error Message	None.
Possible Cause	This is expected behavior. When a macro runs, the operating system takes over the PC and locks out all user input.
Recommended Action	Minimize the length of time the macro runs.
Release	CAD Unified CCX 8.5
Associated CDETS #	None.
