

## Macro with delays causes the PC to lock up

<b>Problem Summary</b>	The administrator created a macro and put in some delays. This appears to cause the PC to lock up while the macro runs.
<b>Error Message</b>	None.
<b>Possible Cause</b>	This is expected behavior. When a macro runs, the operating system takes over the PC and locks out all user input.
<b>Recommended Action</b>	Minimize the length of time the macro runs.
<b>Release</b>	CAD Unified CCX 8.5
<b>Associated CDETS #</b>	None.
