

Not able to view/edit rmcm configurations from node2 appadmin in an HA setup

Problem Summary	Node1 Appadmin displays the entire rmcm configuration correctly. However from node2 appadmin experiencing database inconsistency and unable to access/view the configurations under RMCM subsystem. Displaying the following message in the Appadmin. "There was an error reading/updating the database. Please contact the administrator."
Error Message	"There was an error reading/updating the database. Please contact the administrator."
Possible Cause	Node1 and node2 Config datastores are not in sync.
Recommended Action	Deactivate and Activate Config and Historical datastores on node2 from the appadmin control center->component activation page.
