

## Not able to view/edit rmcm configurations from node2 appadmin in an HA setup

<b>Problem Summary</b>	Node1 Appadmin displays the entire rmcm configuration correctly. However from node2 appadmin experiencing database inconsistency and unable to access/view the configurations under RMCM subsystem. Displaying the following message in the Appadmin.  "There was an error reading/updating the database. Please contact the administrator."
<b>Error Message</b>	"There was an error reading/updating the database. Please contact the administrator."
<b>Possible Cause</b>	Node1 and node2 Config datastores are not in sync.
<b>Recommended Action</b>	Deactivate and Activate Config and Historical datastores on node2 from the appadmin control center->component activation page.
<b>Release</b>	Release 7.0, Release 5.0
<b>Associated CDETS #</b>	None
